

NSF/ANSI Certified Powder Coatings

IFS Coatings has a full range of NSF/ANSI certified powder coatings. Each high quality, certified powder coating has been thoroughly tested by NSF and passes the strict testing and performance specifications.

There are several NSF specifications and IFS Coatings' NSF powders are certified to NSF 51 and NSF 61.

NSF 51

NSF/ANSI Standard 51 establishes minimum public health and sanitation requirements for finishes used in the manufacture of commercial food service equipment and its components. The requirements of this standard are intended to ensure that the composition and surface finish of food equipment materials are such that a material will not adulterate food nor render food equipment difficult to clean and sanitize.

This means products such as broilers, beverage dispensers and stock pots, and components such as tubing, gaskets and valves can all be protected with quality NSF certified powder coatings that also boast great sustainability credentials.

IFS Coatings' NSF/ANSI 51 certified powder coatings are available as single coat applications and come in a range of colors including black, blue, beige - brown, gray, green, red, white and yellow.

NSF 61

NSF 61/ANSI Standard 61 applies to materials and coatings used in the manufacture of equipment that comes into contact with either potable water or products that support the production of potable water. This means that manufacturers of metal pipes, tanks, fittings, valves and faucets can specify these approved IFS powder coatings and protect parts that contact drinking water, drinking-water chemicals or both, with an environmentally responsible, NSF certified powder coating.

IFS Coatings' NSF/ANSI 61 certified powder coatings are available as single coat applications and come in a range of colors including black, blue, brown, gray, green, red, white and yellow.

NSF/ANSI Certified Powder Coatings

Where can I find which products are certified to NSF standards?

You can see the complete and up to date list of IFS Coatings NSF/ANSI certified powders on the NSF website. Simply go to NSF.org, and "Search Certified Products and Systems". There is a full range of products in various different colors.

What is NSF?

The National Sanitation Foundation, or NSF, is accredited by the American National Standards Institute (ANSI), so you will often see the specifications listed as NSF/ANSI.

The NSF was founded in 1944, with a stated mission "to protect and improve global human health." As part of their work, NSF develops public health standards and certifications that help protect food, water, consumer products and the environment. They are an independent, accredited organization, and test, audit and certify products and systems as well as provide education and risk management.

Talk to your IFS representative for further information on NSF/ANSI Certified Powder Coatings.
